

# B-32 EXPLORATION

Dear Fellow Shareholder

It is hard to believe that it has been just over a year since we closed our financing. Significant changes have happened in all aspects of our lives and we must adjust to our new normal. The oil and gas industry has been amongst the hardest hit industries and will have to make major adjustments to survive and thrive moving forward. As we write this letter, Cenovus announced it is taking over Husky Energy, not so they can find more oil, but so they can produce it cheaper with less staff in order to improve their cash return to shareholders. Providing a cash return to shareholders is going to be the new norm for oil and gas companies and those that do it well will be rewarded by the market.

At B-32 Exploration we find ourselves in an enviable position to excel in this new reality. We have discussed the success Murphy has been having in our analog pool at Kaybob in past notes. This success has continued with Murphy not just drilling the best Duvernay oil wells in Canada, but the best oil wells in all of Canada. The following is from our latest corporate presentation which highlights this success:

## INDUSTRY ACTIVITY IN THE OIL WINDOW

### Kaybob Volatile Oil Window Outperforming

- Early development in the East Shale Basin in 2015 lead the way to a surge of activity throughout the oil window peaking in 2018 with over 100 wells drilled.
- The Kaybob Volatile oil window emerged in 2018 and has outperformed all other Duvernay sub basins in the last 3 years
- Murphy's volatile oil wells in Kaybob have reached the top well list in Alberta for all oil plays in 2020
- 350 wells drilled into the oil window with most operators moving from delineation into development mode

### Top Performing Murphy Oil Wells Have Analogous Reservoir Characteristics to B-32

20

As these wells make up part of our data set that we base B-32's expected well performance on, we have had to adjust our type curve upwards as it no longer represented the reality of Murphy's great results. Our new type curve is still conservative compared to Murphy's latest wells as we wanted to account for some additional risk. The resulting single well economics are very strong with an internal rate of return (IRR) of 97% at \$60 USWTI and 59% at US\$50 WTI. Based on a 15,000 bbl/d project, B-32 Exploration requires a \$34/bbl WTI oil price to achieve free cash flow breakeven (operating cash flow less

SUITE 650, 635 - 8 AVE SW  
CALGARY, AB T2P 3M3  
WWW.B32EXPLORATION.CA

maintenance capital required to hold production flat) which is top quartile on a North American basis. The significance of this change becomes most evident in our financial model. In the following slide, B-32 generates significant free cash flow beginning in 2025 and can generate >\$100 million/year of free cash flow for 30 years with existing drilling inventory.

## PRODUCTION AND CASH FLOW – 10 YEAR PROGRAM

Average Annual Production (bbl/d)

Annual Cash Flow (\$mm's) <sup>(1,2)</sup>

Free Cash Flow Begins in 2025, ~30 Years of Drilling Inventory Left after 2030

1. Run at flat \$60 WTI, \$6 USD Diff, 1.3 FX, \$2.00 AECO gas
2. A.T. Operating Cash Flow = Net Operating Income Less G&A Less Interest and Tax

B-32 EXPLORATION

33

Our scalable cashflow project allows us to explore multiple paths to financing. Unfortunately, today's capital market is essentially shut down, but we continue to educate the investment community on our project so that when the new normal turns into the normal we will be well positioned to transact. B-32 Exploration is positioned to be strategic with its timing due to reasonable land tenure and a cash balance of \$800 thousand.

Stay safe and if you have any questions please feel free to reach out to any of us.

Sincerely yours,

## NOTES TO THE FINANCIAL STATEMENTS

*For the three and nine months ended September 30, 2020, with comparative figures for 2019 (unaudited).*

*All amounts are stated in Canadian Dollars unless otherwise noted.*

### 1. REPORTING ENTITY

B-32 Exploration Ltd. ("the Company" or "B-32") is a privately held corporation, incorporated in Canada on February 8, 2018, with its head office located at 650 – 635 8 Avenue SW, Calgary, Alberta. The Company is engaged in the appraisal of oil and natural gas in Western Canada. B-32 is an early stage enterprise that has accumulated a large contiguous land base prospective for light oil. The Company does not have any proved or probable reserves.

### 2. BASIS OF PRESENTATION

#### (a) Statement of compliance:

These unaudited interim financial statements for the three and nine month periods ended September 30, 2020 have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB") applicable to the preparation of interim financial statements, including International Accounting Standards ("IAS") 34, Interim Financial Reporting. These unaudited interim financial statements were approved and authorized for issue by the Board of Directors on October 20, 2020.

#### (b) Basis of measurement:

The interim financial statements have been prepared on a going concern basis under the historical cost basis.

#### (c) Functional and presentation currency:

Items included in the financial statements are measured using the currency of the primary economic environment in which the Company operates (the "functional currency"). The financial statements are presented in Canadian dollars, which is the Company's functional and presentation currency.

### 3. SIGNIFICANT ACCOUNTING JUDGMENTS, ESTIMATES AND ASSUMPTIONS

The preparation of the Company's financial statements requires management to make judgments, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the disclosure of contingent liabilities at the end of the reporting period. However, uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of the asset or liability affected in future periods.

Where applicable, further information about the significant accounting judgments, estimates and assumptions made in preparing the financial statements is disclosed in the notes specific to that item.

#### (a) Fair value of financial instruments:

Where the fair value of certain financial assets and financial liabilities recorded in the balance sheet cannot be derived from active markets, their fair value is determined using valuation techniques including the discounted cash flow model. The inputs to these models are taken from observable markets where possible, but where this is not feasible, a degree of judgment is required in establishing fair values. The judgments include considerations of inputs such as liquidity risk, credit risk and volatility. Changes in assumptions about these factors could affect the reported fair value of financial instruments.

Trade and other receivables and trade and other payables are classified at amortized cost. The fair values of trade and other receivables and trade and other payables approximate their carrying amounts due to their short terms to maturity.

#### (b) Income taxes:

Tax regulations and legislation are subject to change and differing interpretations requiring management judgment. Deferred tax assets are recognized when it is considered probable that deductible temporary differences will be recovered in future periods based on future taxable profits, which requires management judgment. Deferred tax liabilities are recognized when it is considered probable that temporary differences will be payable to tax authorities in future periods, which requires management judgment. Income tax filings are subject to audits and reassessments and changes in facts, circumstances and interpretations of the standards may result in a material increase or decrease in the Company's provisions for income taxes.

#### (c) Share-based compensation

The company measures the cost of equity-settled transactions with employees, consultants and directors by reference to the fair value of the equity instruments at the date at which they were granted. The fair value of stock options is measured

using a Black Scholes option pricing model. Measurement inputs include share price on measurement date, exercise price of the instrument, expected volatility (based on weighted average historic volatility adjusted for changes expected due to publicly available information), weighted average expected life of the instruments (based on historical experience and general option holder behaviour), expected dividends and the risk-free interest rate (based on Government of Canada bonds).

#### 4. SIGNIFICANT ACCOUNTING POLICIES

The accounting policies set out below have been applied consistently to all periods presented in these financial statements.

(a) Intangible exploration and evaluation assets:

(i) Recognition and measurement:

*Exploration and evaluation costs*

The Company accounts for exploration and evaluation ("E&E") costs in accordance with IFRS 6 "Exploration for and Evaluation of Mineral Resources." Undeveloped land is accounted for as exploration and evaluation assets on the statements of financial position. Pre-license E&E costs and lease expiries are recognized in the statements of loss and comprehensive loss as incurred. Costs of exploring for and evaluating oil and natural gas properties are capitalized and the resulting E&E assets are tested for impairment.

E&E costs related to each license/prospect are initially capitalized within "exploration and evaluation assets." Such E&E assets may include costs of license acquisition, technical services and studies, seismic acquisition, exploration drilling and testing, directly attributable overhead and administrative expenses, including remuneration of production personnel and supervisory management and the projected costs of retiring the assets (if any), but do not include general prospecting or evaluation costs incurred prior to having obtained the legal rights to explore an area, which are expensed directly to earnings as they are incurred.

E&E assets are not depleted and are carried forward until technical feasibility and commercial viability of extracting an oil or natural gas resource is considered to be determined. The technical feasibility and commercial viability of extracting a mineral resource is considered to be determined when proved and/or probable reserves are determined to exist. A review of each exploration licence or field is carried out, at least annually, to ascertain whether proved and/or probable reserves have been discovered.

Upon determination of proved and probable reserves, E&E assets attributable to those reserves are first tested for impairment at the CGU level, and then reclassified from E&E assets to property, plant and equipment.

(ii) Subsequent costs:

Costs incurred subsequent to the determination of technical feasibility and commercial viability are included in the asset's carrying amount or recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Company and the cost can be measured reliably. The carrying amount of a replaced asset is derecognized when replaced. Routine repairs and maintenance costs are charged to earnings during the period in which they are incurred.

(b) Impairment:

(i) Financial assets:

A financial asset is assessed at each reporting date to determine whether there is any objective evidence that it is impaired. A financial asset is considered to be impaired if objective evidence indicates that one or more events have had a negative effect on the estimated future cash flows of that asset.

An impairment loss in respect of a financial asset measured at amortized cost is calculated as the difference between the amortized cost of the loan or receivable and the present value of the estimated future cash flows, discounted using the instrument's original effective interest rate. The carrying amount of the asset is reduced by this amount either directly or indirectly through the use of an allowance account.

Individually significant financial assets are tested for impairment on an individual basis. The remaining financial assets are assessed collectively in groups that share similar credit risk characteristics.

All impairment losses are recognized in earnings.

An impairment loss on financial assets carried at amortized cost is reversed if the reversal can be related objectively to an event occurring after the impairment loss was recognized. For financial assets measured at amortized cost, the reversal is recognized in earnings.

(ii) Non-financial assets:

The carrying amounts of the Company's non-financial assets, other than E&E assets, are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists, then the asset's recoverable amount is estimated. These indicators include, but are not limited to, future prices, future cost and reserves value. E&E assets are assessed for impairment when they are reclassified to property, plant and equipment, as oil and natural gas development and production ("D&P") assets, and also if facts and circumstances suggest the carrying amount exceeds the recoverable amount.

(c) Provisions:

A provision is recognized if, as a result of a past event, the Company has a present legal or constructive obligation that can be estimated reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation. Where the Company expects some or all of the provision to be reimbursed, for example under an insurance contract, the reimbursement is recognized as a separate asset but only when the reimbursement is virtually certain. Provisions are determined by discounting the expected future cash flows at a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the liability. Provisions are not recognized for future operating losses. There are no provisions currently recognized.

(d) Income tax:

Income tax expense comprises current and deferred tax. Income tax expense is recognized in earnings except to the extent that it relates to items recognized directly in equity, in which case it is recognized in equity.

Current tax is the expected tax payable on the taxable income for the year, using tax rates enacted or substantively enacted at the reporting date, and any adjustment to tax payable in respect of previous years.

Deferred tax is recognized using the balance sheet method, providing for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. Deferred tax is not recognized on the initial recognition of assets or liabilities in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit. In addition, deferred tax is not recognized for taxable temporary differences arising on the initial recognition of goodwill. Deferred tax is measured at the tax rates that are expected to be applied to temporary differences when they reverse, based on the laws that have been enacted or substantively enacted by the reporting date. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset, and they relate to income taxes levied by the same tax authority on the same taxable entity, or on different tax entities, but the Company intends to settle current tax liabilities and assets on a net basis or the tax assets and liabilities will be realized simultaneously.

A deferred tax asset is recognized to the extent it is probable that future taxable profits will be available against which the temporary difference can be utilized. Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realized. Deferred tax assets and liabilities are presented as non-current.

(e) Loss per share:

Basic loss per share is calculated by dividing net loss for the period by the weighted average number of common shares outstanding during the period. Diluted loss per share is calculated by dividing the net loss by the weighted average number of common shares outstanding during the year, plus the weighted average number of common shares that would be issued if all the dilutive potential common shares were converted into common shares. The dilutive potential common shares consist of share-based compensation for which dilution is determined by assuming that the proceeds received from "in-the-money" stock options and warrants and unrecognized future share-based compensation expense are used to repurchase common shares at the average market rate during the period.

(f) Share-based payments:

Under the Company's stock option plan, options to purchase common shares were granted to directors and officers at market prices. Option grants of the Company are measured at fair value at the date of grant and recognized as share-based compensation expense with a corresponding increase in contributed surplus. The total amount to be expensed is determined by reference to the fair value of the options granted, excluding the impact of any non-market service and performance vesting conditions. Non-market vesting conditions are included in assumptions about the number of options that are expected to vest. When options vest in instalments over the vesting period, each instalment is accounted for as a separate arrangement. A forfeiture rate is estimated on the grant date and, at each reporting date, the Company revises its estimates of the number of options that are expected to vest.

(g) Changes in accounting policy and disclosure

- (i) New and amended standards adopted by the Company:
  - The Company adopted IFRS 16 “Leases”, which replaces IAS 17 “Leases”, on January 1, 2019. For lessees applying IFRS 16, a single recognition and measurement model for leases applies, with required recognition of assets (“right-of-use asset”) and liabilities (“lease obligation”) recognized on the balance sheet for contracts that are, or contain, a lease. The Company does not hold any leases and the change did not impact the Company’s financial statements.
- (ii) Standards, amendments and interpretations to existing standards that are not yet effective and have not been early adopted by the Company:
  - No new or amended standards upcoming for the Company in the current period.

## 5. EXPLORATION AND EVALUATION ASSETS

(\$)	
Balance at December 31, 2019	6,439,752
Additions	234,262
Balance at September 30, 2020	6,674,014

Exploration and evaluation assets consist of the Company’s undeveloped lands which are pending the determination of proved or probable reserves. Additions represent undeveloped land purchases and costs incurred on E&E assets during the period.

As at September 30, 2020, oil prices had declined significantly since December 31, 2019, however, the Company reviewed the following indicators of impairment under IFRS 6 and determined that none of them indicated an impairment existed of the exploration and evaluation assets:

- Rights to explore in an area have expired or will expire in the near future without renewal
- Substantive further exploration or evaluation is not planned or budgeted
- A decision to discontinue exploration and evaluation in an area because of the absence of commercial reserves
- Sufficient data exists to indicate the carrying value will not be fully recovered from future development and production

As a result, further impairment testing was not conducted.

## 6. LONG-TERM DEBT

Long-term debt is comprised as follows:

(\$)	
Balance at December 31, 2019	0
Additions	40,000
Balance at September 30, 2020	40,000

Long-term debt consists of a Canadian Emergency Business Account (“CEBA”) loan obtained through CIBC. Under the loan agreement, the interest rate is 0% per year with no principal payments required. \$10,000 (25%) of the \$40,000 loan is eligible for complete forgiveness if \$30,000 is fully repaid on or before December 31, 2022. If \$30,000 cannot be repaid by December 31, 2022, the outstanding loan balance will be automatically converted into a three-year term loan, charging a fixed interest rate of 5% per year payable monthly. The loan does not contain any financial or non-financial covenants.

## 7. SHARE CAPITAL

The Company is authorized to issue an unlimited number of common shares without par value.

Nine Months Ended September 30, 2020	Number of Shares	Amount (\$)
<b>Common Shares</b>		
Balance at December 31, 2019	5,715,680	7,743,036
Equity issuance	0	0
Balance at September 30, 2020	5,715,680	7,743,036

Nine Months Ended September 30, 2019	Number of Shares	Amount (\$)
<b>Common Shares</b>		
Balance at December 31, 2018	3,702,002	3,702,002
Equity issuance	2,013,678	4,041,034
Balance at September 30, 2019	5,715,680	7,743,036

## 8. SHARE-BASED PAYMENTS

### Stock Option Plan

Under this plan, directors and officers of the Company possess rights to acquire common shares. Options granted under this plan vest equally over a three-year period and expire ten years from the grant date. The fair market value of the January 1, 2020 options granted was determined using a volatility rate of 50% and a risk-free rate of 1.70%. The Company uses a fair value methodology to value the option grants.

The following tables summarize information about the Company's stock option plan:

Stock Options Outstanding	Number of Options	Weighted Average Exercise Price (\$/Option)
<b>Common Shares</b>		
Balance at December 31, 2019	0	0
Stock Options Granted	550,000	3.00
Balance at September 30, 2020	550,000	3.00

Stock Options Outstanding			Stock Options Exercisable		
Range of Exercise Prices (\$/option)	Number Outstanding	Weighted Average Remaining Contractual Life	Weighted Average Exercise price (\$/option)	Number Exercisable	Weighted Average Exercise price (\$/option)
3.00	550,000	9.5 Years	3.00	550,000	3.00

Share-based compensation:

The options outstanding for the period ended September 30, 2020 resulted in share-based compensation expense of \$190,755 and \$566,045 for the three and nine months ended September 30, 2020 (2019 – \$0). Compensation expense associated with options granted under the plan is recognized in earnings over the vesting period of the plan with a corresponding increase in contributed surplus. The exercise of options is recorded as an increase in common shares with a corresponding reduction in contributed surplus.

## 9. FINANCIAL RISK MANAGEMENT

The Company is exposed to financial risks arising from its financial assets and liabilities. The financial risks include market risk (commodity prices, interest rates and foreign exchange rates), credit risk and liquidity risk.

(a) Market Risk

Market risk is the risk that the fair value of future cash flows of financial assets or liabilities will fluctuate due to movements in market prices and is comprised of the following:

#### *Commodity Price Risk*

Commodity price risk is the risk that the fair value of future cash flows will fluctuate as a result of changes in commodity prices. Commodity prices for petroleum and natural gas are impacted by not only the relationship between the Canadian and United States dollar, but also world economic events that dictate the levels of supply and demand.

In the future, the Company may enter into various financial derivative forward sales contracts and physical sales contracts to protect its cash flow from operating activities. The Company's production is expected to be sold using "spot" or near-term contracts with prices fixed at the time of transfer of custody or on the basis of a monthly average market price. The Company, however, may give consideration in certain circumstances to the appropriateness of entering into long-term, fixed price marketing contracts. The Company does not enter into commodity contracts other than to meet the Company's expected sale requirements.

#### *Interest Rate Risk*

Interest rate risk is the risk that future cash flows will fluctuate as a result of changes in market interest rates. At September 30, 2020, the Company does not have any interest-bearing bank credit facilities and a one percent change in interest rates would have no impact on net earnings.

#### *Currency Risk*

Foreign currency exchange rate risk is the risk that the fair value of future cash flows will fluctuate as a result of changes in foreign exchange rates. The Company does not sell or transact in any foreign currency; however, the United States dollar influences the price of petroleum and natural gas sold in Canada. The Company's financial assets and liabilities are not affected by a change in currency rates. The Company had no foreign exchange contracts in place at September 30, 2020 or 2019.

#### (b) Credit Risk

Credit risk is the risk that the counterparty to a financial asset will default, resulting in the Company incurring a financial loss. This credit exposure is mitigated with credit practices that limit transactions according to counterparties' credit quality. The Company does not currently have any trade receivables.

#### (c) Liquidity Risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions, without incurring unacceptable losses or risking damage to the Company's reputation.

Typically, the Company ensures that it has sufficient cash on demand to meet expected operational expenses for a period of 9 – 12 months, including the servicing of financial obligations; this excludes the potential impact of extreme circumstances that cannot reasonably be predicted, such as natural disasters. To achieve this objective, the Company has raised sufficient capital and prepares annual capital expenditure budgets, which are regularly monitored and updated as considered necessary.

The financial liabilities on the statements of financial position include trade and other payables.

The following are the contractual maturities of financial liabilities, including estimated interest payments, excluding the impact of netting agreements, at September 30, 2020:

As at September 30, 2020 (\$)	Carrying Amount	Contractual Cash Flows	Less than 1 Year	1 – 2 Years	2 – 5 Years	More Than 5 Years
